DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 9 and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Kaplan et al (US Patent No. 7,272,271).

Regarding claim 9, referring to Figure 4, Kaplan et al teaches a method for optical transmission of a polarization division multiplexed signal having two orthogonal data signals whose carrier signals have the same wavelengths and are modulated by data signals, comprising:

shifting (i.e., phase shifters 107 and 207, Fig. 4) the phase of the carrier signals so that the carrier signals are phase shifted 90° relative to one another,

wherein the phase difference between the carrier signals is controlled (i.e., the phase shifters 107 and 207 are controlled by a controller 304 and 305, Fig. 4, col. 5, lines 17-67 and col. 6, lines 1-9).

Regarding claim 10, Kaplan et al further teaches wherein that to obtain a phase control criterion the circular polarization component of the polarization division multiplexed signal is measured to provide a control signal (i.e., Fig. 4, col. 5, lines 17-67 and col. 6, lines 1-9).

Allowable Subject Matter

4. Claims 11-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 16-19 are allowed.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Farries et al (US Patent No. 6,607,313) discloses optical polarization multiplexed system.
